Pittcon Industries Acquires Architectural Art Mfg., Inc

Riverdale, MD, July 14, 2005 – Pittcon Industries, a manufacturer of architectural metal and gypsum board specialties, has acquired Architectural Art Mfg., Inc., a producer of building expansion joint and trench covers.

This acquisition, completed July 13, 2005, increases Pittcon's expansion joint offering to more than 500 styles and sizes. "With Architectural Art, we now have an expansion joint cover for nearly every interior and exterior application, including walls, floors, ceilings and roofs." says Ron Moore, Pittcon's vice president and director of marketing and sales.

Expansion joint covers are required in large buildings to accommodate movement due to structural dynamics, thermal expansion, and earthquakes. The Architectural Art products are manufactured from aluminum, brass and stainless steel. The products are available with optional fire-rated barriers when required to assure building safety.

Architectural Art also brings a full line of trench covers into Pittcon's portfolio. Trench covers are built into floors for use as drains or to allow access to in-floor piping and wiring.

Architectural Art's products will continue to be sold under the Architectural Art name. Manufacturing and customer service responsibilities, however, have already been transferred to Pittcon's Riverdale, MD headquarters and factory. In some territories, established Architectural Art sales representation will be maintained, adding to Pittcon's current team of 35 manufacturer representatives. In addition to Pittcon's East Coast facility, the Architectural Art products will be serviced from Pittcon's factory in Phoenix, AZ and warehouse in Ontario, CA.

Moore says, "Architectural Art's customers can now be assured of more responsive service than they may have received in the past. Pittcon's larger team of estimators and project managers will provide customers with faster response to questions and request for
